

## **AMENDMENTS TO THE CLAIMS**

This listing of claims will replace all prior versions, and listings, of claims in the application:

### **LISTING OF CLAIMS**

1. (Previously presented) A battery pack, comprising:  
a plurality of battery modules each having at least one positive terminal and one negative terminal associated therewith, wherein at least one of said battery module terminals includes a respective tang that is integral to the terminal; and  
a flexible circuit configured to connect said plurality of positive and negative terminals to an output of said battery pack, wherein said flexible circuit further includes windows configured to allow said tangs to pass through, wherein an edge of said window defines a hinged edge for a flap configured such that said flaps are in registry with said tangs and at least one of said battery module terminals is electrically connected to said flap via said tang.
2. (Original) The battery pack of claim 1, wherein at least one of said battery modules comprises a plurality of individual battery units, each battery unit including at least one positive terminal and one negative terminal.
3. (Original) The battery pack of claim 2, wherein at least one of said battery units includes a plurality of bicells.
- 4-7. (Canceled)
8. (Original) The battery pack of claim 1, wherein said flexible circuit further comprises a plurality of jumpers.
9. (Original) The battery pack of claim 1, wherein said flexible circuit further comprises a controller connector, said controller connector being configured to receive a battery controller, said connector being further configured to be in sensing relation to each battery module.
10. (Original) The battery pack of claim 1, wherein said flexible circuit further comprises a fuse.
11. (Original) The battery pack of claim 1, wherein said flexible circuit further comprises a pack connector.

12. (Original) The battery pack of claim 1, wherein said flexible circuit further comprises a current sensor.

13. (Original) The battery pack of claim 1, further comprising at least one living hinge formed along a flex line on said flexible circuit.

14. (Previously presented) A battery pack, comprising:  
a plurality of battery modules each having at least a positive terminal and a negative terminal associated therewith, wherein at least one of said battery modules comprises a plurality of individual battery units, each battery unit including at least one positive terminal and one negative terminal, wherein at least one of said battery unit terminals includes a respective tang that is integral to the terminal; and

a flexible circuit configured to connect said plurality of positive and negative battery unit terminals to an output of said battery pack, wherein said flexible circuit further includes windows configured to allow said tangs to pass through, wherein an edge of said window defines a hinged edge for a flap configured such that said flaps are in registry with said tangs and at least one of said battery unit terminals is electrically connected to said flap via said tang.

15-16. (Canceled)

17. (Original) The battery pack of claim 14, wherein said flexible circuit further comprises a controller connector, said controller connector being configured to receive a battery controller, said connector being further configured to be in sensing relation to each battery unit.

18-21. (Canceled)
